

HIDR Website – Validation Testing Bug Report

BUG-001 — Annual Report Publications Fail to Load

Module: Publications → Annual Report

Severity: Major

Priority: High

Bug Type: Functional / Validation

Steps to Reproduce:

1. Open the HIDR website.
2. Navigate to **Publications**.
3. Open **Annual Report**.
4. Observe the publication section.

Actual Result:

The page displays “**Failed to load publications.**”

Expected Result:

Available annual reports should load successfully and be displayed to the user.

Impact:

Users cannot access the organization’s annual reports.

Status: Open

Evidence:

The live Annual Report/publications page currently exposes the “**Failed to load publications.**” message.

Screenshot:

BUG-002 — Loading Message Remains Visible on Publications Page

Module: Publications

Severity: Medium

Priority: Medium

Bug Type: UI / Functional

Steps to Reproduce: 1. Open the HIDR website. 2. Navigate to the Publications section. 3. Open a publication category. 4. Wait for the page content to load.

Actual Result:

A “**Loading...**” message can remain visible when publication content is unavailable.

Expected Result:

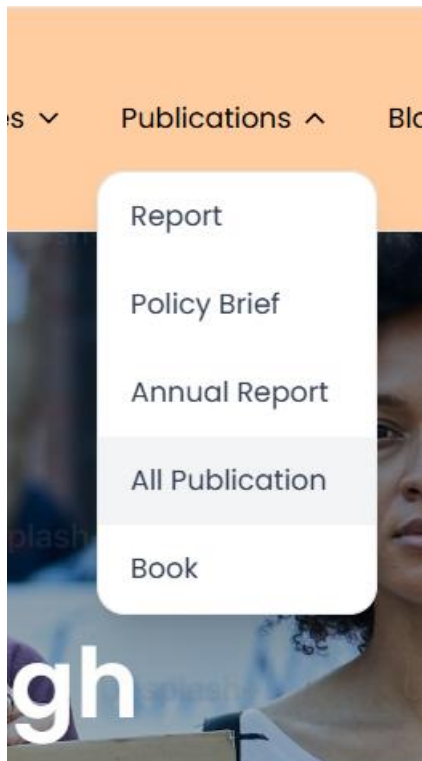

The loading indicator should disappear after content is loaded. If content cannot be retrieved, a meaningful error message with an appropriate retry option should be displayed.

Impact:

Users may assume that the website is still processing or is malfunctioning.

Status: Open

Screenshot:

BUG-003 — Blog Contains Possible Placeholder/Test Content

Module: Blog

Severity: Medium

Priority: Medium

Bug Type: Content Validation

Steps to Reproduce:

1. Open the HIDR website.
2. Navigate to **Blog**.
3. Review the available blog posts.
4. Check the title and description of the suspicious post.

Actual Result:

A blog entry contains what appears to be placeholder/test text such as “**sdfc**” and “**dfgvhbjl**”.

Expected Result:

Only approved, meaningful production content should be visible to website visitors.

Impact:

Placeholder content reduces website credibility and may indicate that test data has been deployed to production.

Status: Open

BUG-004 — Publication Price Displays Incomplete Currency Information

Module: Publications / Book

Severity: Medium

Priority: Medium

Bug Type: UI / Data Validation

Steps to Reproduce:

1. Navigate to **Publications**.
2. Open a publication/book containing a price.
3. Check the displayed price.

Actual Result:

The price may appear in an incomplete format such as:

Rs. /-

Expected Result:

The system should display a valid price, for example:

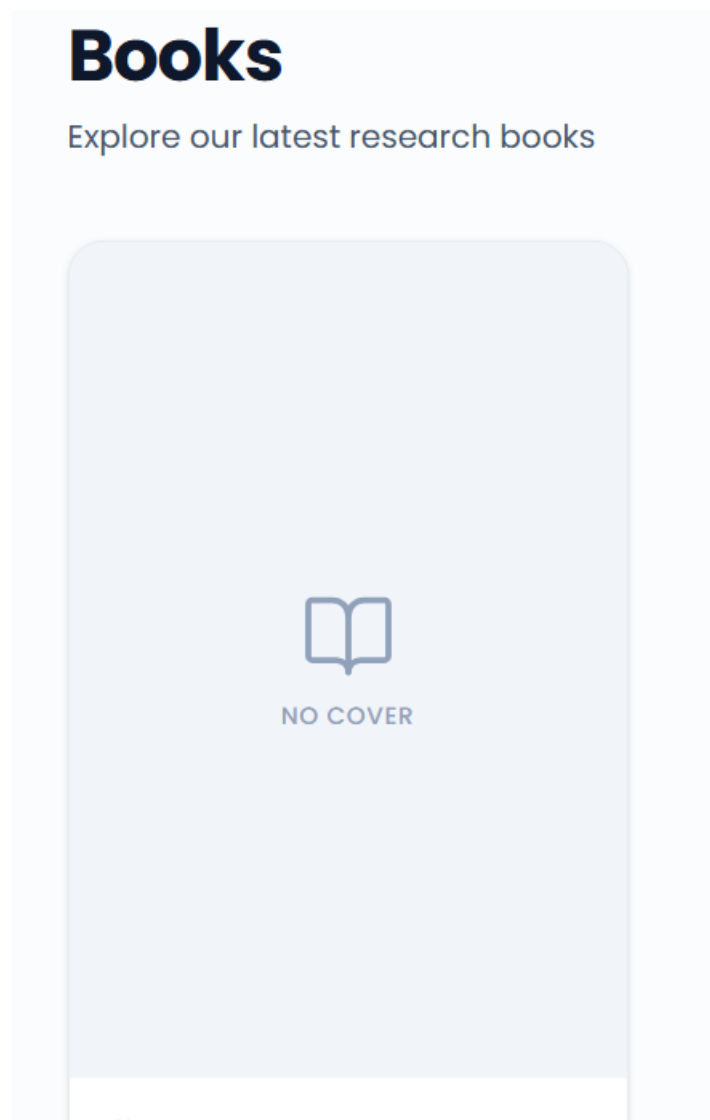

Rs. 500/-

or clearly indicate **Free** if the item has no purchase price.

Impact:

Users cannot determine the actual cost of the publication.

Status: Open

BUG-005 — Dynamic Publication Content Does Not Provide Proper Error Recovery

Module: Publications

Severity: Major

Priority: High

Bug Type: Functional / Error Handling

Steps to Reproduce:

1. Open the HIDR Publications page.
2. Wait for the publication data request to complete.
3. Observe the result when publication data cannot be retrieved.

Actual Result:

The page displays an error such as **“Failed to load publications.”** without an obvious user recovery mechanism.

Expected Result:

The application should:

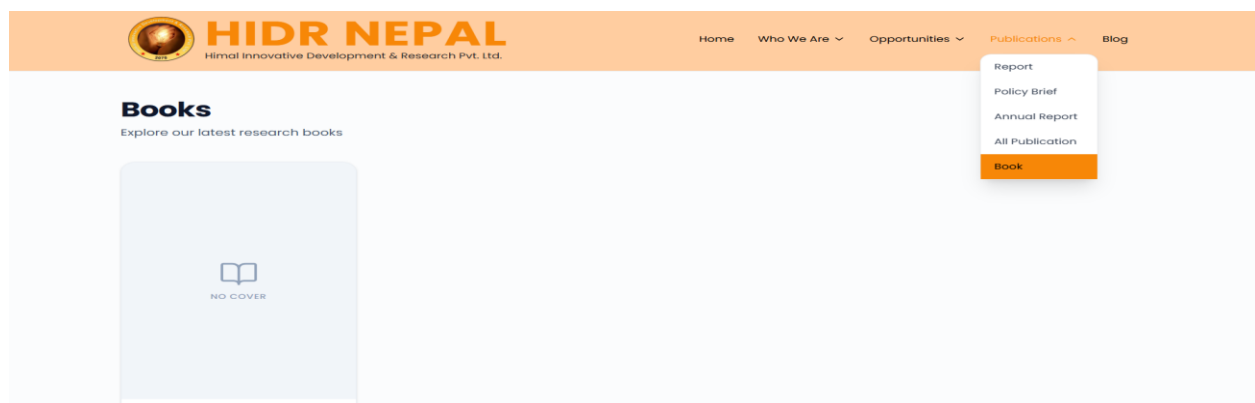

- Display a user-friendly error message.
- Provide a **Retry** option.
- Preserve the page layout.
- Avoid leaving the user with an unusable publication section.

Impact:

Users have no clear way to recover from a temporary data-loading failure.

Status: Open

BUG-006 — Dynamic Content Loading Requires Validation

Module: Homepage

Severity: Medium

Priority: Medium

Bug Type: Functional / UI

Steps to Reproduce:

1. Open the HIDR homepage.
2. Scroll through the homepage.
3. Observe dynamically loaded sections.
4. Refresh the page several times.
5. Test using a slower network connection.

Actual Result:

Some sections may expose loading/fetching states while dynamic content is being retrieved.

Expected Result:

Dynamic content should load within a reasonable time. If loading fails, the system should display a proper fallback/error state.

Impact:

Users may see incomplete homepage content.

Status: Open

BUG-007 — Contact Form Validation Requires Improved Error Handling

Module: Contact Us

Severity: Medium

Priority: Medium

Bug Type: Form Validation

Validation Scenarios:

Test Data	Expected Result
Empty Name	Required-field validation
Empty Email	Required-field validation
Invalid Email	Invalid email message
Empty Phone	Required-field validation if mandatory

Test Data	Expected Result
Alphabetic Phone	Phone validation
Special characters	Appropriate validation
Very long input	Maximum-length validation
Valid data	Form submits successfully

Actual Result:

The contact form should be tested against all invalid and boundary values to verify that client-side and server-side validation behave consistently.

Expected Result:

Clear validation messages should be displayed beside the relevant fields.

Status: To Verify

BUG-008 — Career Application File Upload Validation

Module: Opportunities / Career

Severity: Medium

Priority: Medium

Bug Type: File Validation

Validation Scenarios:

- Upload unsupported file type.
- Upload oversized file.
- Submit without CV.
- Submit without motivation letter.
- Upload empty file.
- Upload valid PDF/DOC file.
- Upload filename containing special characters.

Expected Result:

The application should reject invalid files with clear validation messages and accept supported files within the configured size limit.

Status: To Verify

BUG-009 — Broken Link Validation Across HIDR Website

Module: Website Navigation

Severity: Major

Priority: High

Bug Type: Link / Functional

Steps to Reproduce: 1. Open the HIDR homepage. 2. Collect all internal and external hyperlinks. 3. Send HTTP requests to each URL. 4. Record responses with 4xx/5xx status codes. 5. Manually verify redirected links.

Actual Result:

Any link returning 404, 403, 500, or another unexpected response should be recorded as a broken-link defect.

Expected Result:

All production links should navigate to valid and accessible destinations.

Status: To Verify

BUG-010 — Responsive UI Validation

Module: Entire Website

Severity: Medium

Priority: Medium

Bug Type: UI / Compatibility

Test Devices/Viewports:

- Desktop – 1920×1080
- Laptop – 1366×768
- Tablet – 768×1024
- Mobile – 390×844
- Mobile – 360×800

Validation Points:

- Navigation menu
- Images
- Buttons
- Forms
- Text wrapping
- Cards
- Tables
- Footer
- Horizontal scrolling

Expected Result:

All content should remain readable and usable without unwanted horizontal scrolling or overlapping elements.

Status: To Verify

Recommended Jira Priority

Bug	Issue	Severity	Priority
BUG-001	Annual Report fails to load	Major	High
BUG-002	Loading message remains visible	Medium	Medium
BUG-003	Placeholder blog content	Medium	Medium
BUG-004	Incomplete publication price	Medium	Medium
BUG-005	No proper publication recovery	Major	High
BUG-006	Dynamic homepage loading	Medium	Medium
BUG-007	Contact form validation	Medium	Medium
BUG-008	Career file validation	Medium	Medium
BUG-009	Broken links	Major	High
BUG-010	Responsive UI issues	Medium	Medium

Note: BUG-001 is currently the strongest reproducible functional defect from the live site: the publications page is currently returning **“Failed to load publications.”**

For BUG-003, BUG-004, and the “to verify” items, reproduce the behavior in your browser before marking them **Confirmed**, because dynamic website content can change.
