

HIDR Nepal Website – Test Plan Document

Website Under Test: <https://hidr.com.np/>

Organization: Himal Innovative Development & Research Pvt. Ltd. (HIDR)

Document Type: Web Application Test Plan

Prepared Date: 18 August 2026

Testing Type: Functional, UI/UX, Compatibility, Accessibility, Performance, Security and Content Testing

1.Purpose

The purpose of this test plan is to define the testing approach, scope, objectives, test scenarios, environments and acceptance criteria for the HIDR Nepal website.

The website presents HIDR's organizational information, research and projects, publications, careers, blogs, gallery and contact facilities. The current site includes navigation areas such as About Us, What We Offer, Our Team, Career, Partner with us, Reports, Policy Briefs, Annual Reports, Publications, Books, Blog, Gallery and Contact Us.

The objective is to verify that the website is:

- Functionally correct
- Easy to navigate and use
- Responsive across devices
- Accessible to users with different needs
- Secure against common web vulnerabilities
- Performant under expected traffic
- Free from broken links and major content defects
- Consistent in design and presentation
- Reliable when displaying dynamic content and downloadable resources

2.Scope

2.1 In Scope

Testing will cover the following major website areas:

- Home page
- About Us
- What We Offer
- Our Work / Projects
- Our Team
- Career

- Partner with Us
- Reports
- Policy Briefs
- Annual Reports
- All Publications
- Books / publication purchase pages
- Blog
- Gallery
- Contact Us
- Navigation and footer
- External and downloadable resources
- Images and multimedia
- Forms
- Responsive/mobile behavior
- Browser compatibility
- Accessibility
- Performance
- Basic security
- SEO-related technical checks

The site contains downloadable publications and documents, while individual publication pages can provide information such as publication summaries and a contact-to-buy facility.

The careers area contains an application form with Name, Email, Phone Number, CV, and Motivation Letter fields.

The contact page provides Name, Email, Phone Number and a Send button.

2.2 Out of Scope

Unless specifically requested, the following are outside the initial scope:

- Testing HIDR's internal administrative systems
- Testing third-party systems beyond integration points
- Destructive security testing against production
- Load testing that could affect production availability
- Verification of the factual accuracy of research/publication content
- Testing internal CMS functionality
- Testing payment processing if no online payment functionality is exposed

3. Test Objectives

The Testing team will verify that:

- All major pages can be accessed successfully.
- Navigation links lead to the correct destinations.
- Buttons perform their intended actions.
- Forms validate input correctly.
- Form submissions work correctly.
- Required fields cannot be submitted with invalid/missing data.
- File uploads accept appropriate file types and reject inappropriate files.
- Publications and downloadable documents can be opened/downloaded.
- Images load correctly and maintain appropriate quality/aspect ratio.
- Gallery items open and display correctly.
- Blog posts display correctly.
- Dynamic content loads without errors.
- The website works on desktop, tablet, and mobile devices.
- The website works across supported browsers.
- Text is readable and controls are usable.
- Pages load within an acceptable time.
- Contact and career submissions are handled correctly.

4. Test Approach Testing Types

The following testing types will be performed:

- Functional Testing – Validate business requirements and workflows
- Integration Testing – Verify data flow between modules and external services
- System Testing – End-to-end testing of the complete application
- Regression Testing – Ensure new changes do not break existing features
- UI/UX Testing – Validate layout, responsiveness and usability
- Performance Testing – Basic load and responsiveness and usability
- Security Testing – Authentication, authorization, and data protection checks
- Compatibility Testing – Browser and device compatibility

Test Levels

- Smoke Testing
- System Testing
- User Acceptance Testing (UAT) support Test Design Techniques

- Requirement - based testing
- Boundary value analysis
- Equivalence partitioning
- Exploratory testing Defect Management
- Defects will be logged with severity and priority
- Re-testing and regression testing will follow defect fixes

5. Test Environment

Recommended test environment

Operating Systems

- Windows 11
- macOS
- Android
- iOS

Browsers

- Latest Chrome
- Latest Firefox
- Latest Edge
- Latest Safari
- Android Chrome
- iOS Safari

Network conditions

- High-speed broadband
- Standard mobile network
- Slow/throttled mobile connection

Devices

- Desktop
- Laptop
- Android phone
- iPhone
- Tablet

Where possible, testing should be conducted against a staging environment before production testing.

6. Test Data

Test data should include:

Valid data

- Normal Nepali names
- English names
- Unicode/Nepali text
- Valid email addresses
- Valid phone numbers
- Valid CV files
- Valid motivation letters
- Approved publication records

Invalid/boundary data

- Empty values
- Maximum-length values
- Extremely long values
- Invalid emails
- Invalid phone numbers
- Special characters
- Unicode characters
- HTML
- JavaScript payloads
- SQL-like strings
- Unsupported files
- Oversized files
- Duplicate submissions

No real applicant's personally identifiable information should be used for testing unless appropriate authorization and data-protection controls are in place.

7. Application Inventory

Area	Key Functions
Home	Branding, hero section, featured content, navigation, recent publications
About Us	Organization information
What We Offer	Research, studies, policy review, dialogue, partnerships, capacity enhancement and dissemination
Our Work	Projects/research listing and filtering
Team	Team/member information
Career	Team/member information
Partner with Us	Partnership information/contact

Reports	Research/report listing
Policy Brief	Policy brief listing/download
Annual Reports	Annual report listing/download
Publications	Publication catalogue
Books	Book details and purchase/contact option
Blog	Articles and blog details
Gallery	Articles and blog details
Contact	Contact information and enquiry form
Footer	Quick links, contact information. Copyright

The site's current “What We Offer” content includes research, studies, policy review and analysis, inclusive policy dialogue, partnerships, capacity enhancement, and dissemination.

8. Test Strategy

Testing will be performed using a combination of:

8.1 Manual Testing

- Functional testing
- UI testing
- Exploratory testing
- Content verification
- Responsive testing
- Accessibility checks
- Cross-browser testing

8.2 Automated Testing

Where appropriate:

- Broken-link scanning
- HTML/CSS validation
- Accessibility scanning
- Performance analysis
- Browser automation
- Regression testing

8.3 Security Testing

Perform non-destructive security checks for:

- Input validation
- XSS
- CSRF protection
- SQL injection indicators
- File-upload validation
- Sensitive information exposure
- Security headers
- HTTPS configuration
- Authentication/authorization, if applicable

9. Functional Test Scenarios

TC-FUNC-001: Home Page Loading

Objective: Verify that the home page loads successfully.

Steps:

- Open the website.
- Wait for the page to finish loading.
- Observe all major sections.

Expected Result:

- Page loads without server errors.
- Logo and primary content are displayed.
- Navigation is available.
- No major broken images or empty sections are present.

Priority: Critical

TC-FUNC-002: Main Navigation

Verify:

- Home
- About Us
- What We Offer
- Our Team
- Career
- Partner with Us
- Reports
- Policy Brief
- Annual Report

- All Publication
- Book
- Blog
- Gallery
- Contact Us

Expected Result: Each menu item opens the correct page and does not produce a 404/500 error.

Priority: High

TC-FUNC-003: Home Page CTAs

Verify buttons such as:

- Explore Our Work
- Our Publications
- Read More

Expected Result: Each button navigates to the correct destination.

TC-FUNC-004: Our Work

Verify:

- Project listing
- Project details
- Research entries
- Project status
- Categories/filters
- Pagination, if applicable

The current site presents project/research information and category-style filtering.

TC-FUNC-005: Publications

Verify:

- Publication listing
- Categories
- Publication details
- Cover images
- Summary/description
- Read/download functionality

- Contact/purchase functionality where provided

TC-FUNC-006: Downloadable Documents

For every available document:

- Click the document/download link.
- Verify the file opens or downloads.
- Verify the file is not corrupted.
- Verify the filename and document type.
- Verify the document corresponds to the selected publication.

The website currently exposes multiple downloadable research and policy documents.

TC-FUNC-007: Blog

Verify:

- Blog listing
- Article titles
- Dates
- Images
- Article details
- Read More links
- Pagination, if available

The current blog includes articles relating to gender-based violence and other social issues.

TC-FUNC-008: Gallery

Verify:

- Gallery page loads.
- Event/project categories are displayed.
- Images load.
- Image count indicators work.
- Individual images can be viewed where supported.
- No distorted or missing images occur.

The current gallery contains multiple project/event collections, including training, exposure visits, policy discussions and research-related activities.

10. Form Testing

10.1 Contact Form

Fields:

- Name
- Email
- Phone Number

Test cases:

Test	Input	Expected Results
Valid submission	Valid values	Submission succeeds
Empty Name	Blank	Validation message
Empty Email	Blank	Validation message
Invalid Email	abc@	Validation message
Invalid phone	Alphabetic characters	Validation message
Long input	Excessively long value	Proper validation
Special characters	<script> etc.	Safely handled
Spaces only	“ “	Rejected
Duplicate submission	Same data repeatedly	Handled appropriately

The current contact page exposes these three fields and a Send button.

10.2 Career Application Form

Fields currently exposed include:

- Name
- Email
- Phone Number
- CV
- Motivation Letter

Test:

- Required-field validation
- Valid email
- Invalid email
- Valid phone
- Invalid phone
- CV upload
- Unsupported file type
- Oversized file
- Empty file

- Malicious filename
- Motivation letter validation
- Successful submission
- Duplicate submission
- Error handling
- Confirmation message

11. Responsive Testing

Test at minimum:

Mobile

- 320×568
- 375×667
- 390×844
- 414×896

Tablet

- 768×1024
- 820×1180

Desktop

- 1280×720
- 1366×768
- 1440×900
- 1920×1080

Verify:

- Responsive navigation
- Menu/hamburger behavior
- Text wrapping
- Image scaling
- Cards
- Forms
- Tables
- PDF/download controls
- Gallery
- Footer
- No horizontal overflow

12. Browser Compatibility

Test the website on current supported versions of:

- Google Chrome
- Mozilla Firefox
- Microsoft Edge
- Apple Safari

Mobile:

- Chrome on Android
- Safari on iOS

Verify layout, navigation, forms, downloads, JavaScript, images and animations.

13. Accessibility Testing

The website should be evaluated against **WCAG 2.2 AA** principles where applicable.

Test:

- Keyboard-only navigation
- Visible focus indicator
- Logical tab order
- Skip-to-content functionality
- Heading hierarchy
- Image alternative text
- Form labels
- Form error messages
- Color contrast
- Link/button identification
- Screen-reader compatibility
- Zoom up to 200%
- Text resizing
- No information conveyed by color alone

The current home page exposes a “Skip to main content” mechanism, which should be verified for actual keyboard and screen-reader behavior.

14. Performance Testing

Measure:

- First Contently Paint
- Largest Contently Paint

- Cumulative Layout Shift
- Interaction to Next Paint
- Total page size
- Number of requests
- JavaScript execution
- Image optimization
- Caching
- Server response time

Target Guidelines

Metric	Target
HTTP response time	Preferably < 2 sec
LCP	≤ 2.5 sec
INP	≤ 200 ms
CLS	≤ 0.1
Broken resources	0
Console-critical errors	0

Performance should be assessed on both fast and slower mobile network conditions.

15. Security Testing

Perform controlled, non-destructive testing for:

Input Security

- XSS
- HTML injection
- SQL injection indicators
- Command injection indicators

File Upload

- File extension validation
- MIME-type validation
- File size limits
- Executable file rejection
- Double extensions
- Malicious filenames

Transport Security

Verify:

- HTTPS is enforced.
- HTTP redirects to HTTPS.
- TLS configuration is appropriate.
- No mixed-content resources exist.

Security Headers

Check for appropriate:

- Content-Security-Policy
- X-Frame-Options / frame-ancestors
- X-Content-Type-Options
- Referrer-Policy
- Permissions-Policy
- HSTS

Information Exposure

Check that:

- Debug messages are not exposed.
- Stack traces are not exposed.
- Internal paths are not exposed.
- Credentials/secrets are not present in source code.
- Sensitive form information is not unnecessarily exposed.

16. SEO Testing

Verify:

- Unique page titles
- Meta descriptions
- Canonical URLs
- Correct heading hierarchy
- Robots.txt
- XML sitemap
- Open Graph metadata
- Social sharing metadata
- Descriptive URLs
- Image alt text
- Internal linking
- 404 page
- Redirect behavior
- No unintended noindex
- Search-engine-friendly content

17. Content Testing

Verify:

- Spelling
- Grammar
- Punctuation
- Consistency of organization name
- Correct publication titles
- Correct publication dates
- Correct project names
- Correct contact information
- Correct phone number
- Correct email address
- Consistency between Nepali and English content
- No placeholder text
- No duplicate content
- No obsolete links
- No missing images

The website identifies the organization as Himal Innovative Development & Research and provides Kathmandu contact information and a phone number in several sections.

18. Link Testing

Create a complete inventory of internal and external links.

For each link verify:

- HTTP status
- Correct destination
- No redirect loop
- No unexpected external destination
- HTTPS where available
- No 404
- No 500
- No dead external resource

Expected: Zero broken critical links.

19. Error Handling

Verify appropriate handling for:

- Invalid URL

- 404 page
- Server error
- Network interruption
- Form submission failure
- File upload failure

Slow API response

- Missing image
- Missing publication
- Empty search/filter result
- JavaScript failure

Error messages should be understandable and should not reveal technical implementation details.

20. Dynamic Content Testing

The current home page contains dynamically loaded areas, including recent publication and event/content sections.

Test:

- Initial loading state
- Loading spinner/message
- Successful API response
- Empty API response
- API failure
- Slow response
- Duplicate records
- Missing images
- Invalid data
- Refresh behavior
- Browser back/forward behavior

Expected: Users should never be left with unexplained blank sections or perpetual loading indicators.

21. Compatibility and Regression Matrix

Feature	Chrome	Firefox	Edge	Android	iOS
Home	✓	✓	✓	✓	✓
Navigation	✓	✓	✓	✓	✓
Publications	✓	✓	✓	✓	✓

Downloads	✓	✓	✓	✓	✓
Blog	✓	✓	✓	✓	✓
Gallery	✓	✓	✓	✓	✓
Contact Form	✓	✓	✓	✓	✓
Career Form	✓	✓	✓	✓	✓
Responsive UI	✓	✓	✓	✓	✓

22. Responsive/UI Test Plan

Test every major page at mobile, tablet, laptop, and desktop sizes.

Verify:

- No horizontal scrolling
- No overlapping elements
- Navigation collapses correctly
- Hamburger/menu controls work
- Images scale correctly
- Text does not overflow
- Buttons remain tappable
- Forms fit within viewport
- Cards stack appropriately
- Tables remain usable
- PDFs/download controls remain accessible
- Footer is responsive
- Gallery remains usable
- Font sizes remain readable
- Sticky/fixed elements do not obscure content

Mobile-specific checks

- Touch targets are sufficiently large
- Menu opens/closes correctly
- Form fields are easy to operate
- File upload works from mobile
- Telephone/email links behave appropriately
- No accidental horizontal scrolling
- Images do not cause excessive page height

23. Regression Testing

Regression testing must be performed after:

- Website deployment
- CMS changes
- Plugin/library updates
- Form changes
- Publication uploads
- Navigation changes
- UI redesign
- Server migration
- Security fixes
- Performance optimization
- Browser compatibility fixes

Regression smoke suite

At minimum:

- Homepage
- Main navigation
- About
- What We Offer
- Our Work
- Publications
- One report download
- One policy brief download
- Blog
- Gallery
- Careers
- Career form
- Contact form
- Footer
- Mobile navigation
- HTTPS
- 404 handling

24. Entry Criteria

Testing may begin when:

- Test environment is available.
- Website build is deployed.
- Required pages are accessible.
- Test data is prepared.
- Major requirements are available.

- Forms and integrations are configured.
- Publication files required for testing are available.
- Known limitations are documented.

25. Exit Criteria

Testing may be considered complete when:

- All critical test cases have been executed.
- 100% of Critical/Priority-1 scenarios pass.
- No open S1 defects remain.
- No unresolved S2 defect remains without documented acceptance.
- Major navigation paths work.
- Forms work correctly.
- Publication downloads work.
- Mobile testing is completed.
- Browser compatibility testing is completed.
- Accessibility assessment is completed.
- Security testing has no unresolved critical finding.
- Performance results meet agreed targets.
- Regression testing passes.
- Stakeholders approve known remaining issues.

26. Test Deliverables

26.1 Test Cases

- Detailed test cases covering all modules
- Includes preconditions, test steps, expected and actual results
- Traceability with requirements

26.2 Bug Report (with Screenshots)

Each defect report will include:

- Defect ID
- Title and description
- Steps to reproduce
- Expected vs actual result
- Severity and priority
- Environment details

26.3 Test Summary Report

The report will include:

- Test execution summary
- Total test cases executed
- Passed / Failed / Blocked counts
- Defect statistics
- Overall quality assessment
- Release recommendation

27 Risks and Assumptions

Risks

- Requirement changes during testing phase
- Third-party service downtime (SMS, payment, email)
- Limited test data availability
- Tight release timelines

Mitigation

- Early involvement in requirement reviews
- Buffer time for regression
- Mock or sandbox third-party services Assumptions
- Requirements are clear, approved and stable
- Test environment closely matches production
- Development team provides timely bug fixes

Assumptions

- Requirements are clear, approved and stable
- Test environment closely matches production
- Development team provides timely bug fixes

28. Current Website Observations to Feed Into QA

An initial review of the publicly accessible site indicates that the website has a substantial content surface, including organizational pages, publications, blogs, galleries, careers, contact functionality, and downloadable research material.

The site also currently contains dynamic/loading areas on the homepage, so JavaScript execution and failure states should be explicitly tested rather than testing only static HTML.

The Contact page provides organization contact information and a contact form, while the Careers section provides an application form involving document uploads. These should therefore be treated as high-priority end-to-end workflows.

The website's research/publication function is a core part of HIDR's public offering; its published material includes policy briefs, reports, books, and annual reports. Download integrity, metadata accuracy, accessibility, and mobile document access should therefore be included in every release regression cycle.

29. Final QA Recommendation

The HIDR Nepal website should be tested as a **content-driven public information and research platform**, rather than only as a collection of static web pages.

The highest-risk workflows are:

- Publication discovery and downloads
- Career application and file upload
- Contact/partnership forms
- Mobile/responsive navigation
- Accessibility
- Broken links and missing resources
- Security of user-submitted data/files
- Performance of image- and document-heavy pages

A release should not be considered QA-ready until these workflows have passed end-to-end testing across representative desktop and mobile environments, with no unresolved critical defects.
